

Codebook Subnational Democracy

How to cite: Giraudy, A. (2025). Database of Subnational Federalism in Latin America (v.0.1). DOI:

Explanatory notes

The aim of this document is to present the coding and source of the variables processed for the federal countries of Latin America in which there is subnational democracy understood as the possibility of electing executive authorities in provinces and states. In order to have a better reference of the year in which each country to be coded starts, the following table is presented:

Table 1. Subnational Elections in Latin American Federal Countries

Country	Number of regional subnational units for election	Year of beginning of subnational elections (Name of Executive)	Regulations	Year of beginning of subnational elections (Name of Legislature)	Regulations	Coverage
Argentina	23 provinces	1983 (Gobernadores)	CPA (1983) Art. 5	1983 (Legislaturas Provinciales)	Regulation by each province	1983-2024
Brazil	26 states + Federal District (Brasilia) = 27 federative units	1986 (Governador)	CPB (1988) Art. 27 y 28	1986 (Assembleia Legislativa)	CPB (1988) Art. 27 y 28	1986-2024
Mexico	32 federative entities (31 states and Mexico City)	1917/1985 (gobernadores)	CPMX (1917) Art. 115	1917/1985 (congresos estatales)	CPMX (1917) Art. 116	1985-2024

Source: Own elaboration.

Particularities of subnational democracy by country in Latin America

Argentina: Elections of governors and provincial legislatures have been held since the national organization in the 19th century, with each province establishing its own electoral regulations in their respective provincial constitutions. Although the Argentine provinces have been electing governors and provincial legislatures since the 19th century, it is relevant to note that, after the military dictatorship (1976-1983), the democratic election of these authorities was resumed in 1983, with the return to democracy. The regulations are contained in the National Constitution of 1853, with reforms in force, where Article 5 establishes the provincial autonomy to organize their own electoral institutions and procedures. In 1983, the country held general elections at the national and provincial levels, which was an important milestone for the consolidation of democracy after the military regime. Since then, each province has continued to regulate its subnational elections autonomously.

Brazil: Both the governor and state deputies are elected simultaneously in subnational general elections, which occur every four years, coinciding with the presidential and national legislative elections for senators and federal deputies. The issue to be considered is that, in 1982, with the reestablishment of direct elections for governors and state legislative assemblies, during the democratic transition process under the

government of João Figueiredo. If we take it as from the beginning of democracy it should be 1986 since it is after the presidential elections of that year. After that, there have been 9 electoral processes, the last one being in 2022 and the next one in 2026.

Mexico: Since 1917, each state of the Mexican Republic has had the power to organize its own elections for governor and state congress, following a federalist system that grants political autonomy to the states. State elections are organized by the Local Public Electoral Bodies (OPLEs), under the supervision of the National Electoral Institute (INE). However, it is important to consider that the election of governors and state congresses formally dates back to 1917, 1985 is considered a key milestone because it marks the beginning of a true democratic competition at the subnational level, where the results were no longer guaranteed for the PRI. In the gubernatorial and local congressional elections of 1985-1988, there were important advances for the opposition, particularly for the National Action Party (PAN) in states such as Baja California, which marked a change in state political dynamics. In addition, in the 80's, things like the Fiscal Coordination Law (Ley de Coordinación Fiscal, LCF).

Identification Variables in the Dataset

country_name

Coded country name identifier

- ARGENTINA
- BRAZIL
- MEXICO

Source: Own elaboration.

year

The database has different starting years for each country, as shown in Table 1.

- Argentina: 1983 – 2024
- Brazil: 1986 – 2024
- Mexico: 1985 – 2024

Executive Variables

National Executive

head_name_national

Name of the Head of State (President)

Source: worldstatesmen.org and V-Dem.

sex_head_national

Sex of the Head of State (President)

0 = Male

1 = Female

Source: Own elaboration.

term_head_national

Period of national government in start and end date in format (day/month/year)

Source: V-Dem.

years_nat_gov

Years of government of the head of the national government (president)

Source: worldstatesmen.org and V-Dem.

reelec_nat_gov

Dichotomous variable that indicates the reelection of the head of the national government (president)

1= head of government has been reelected

0= opposite case

Source: Own elaboration with information of V-Dem.

early_exit_nat

Dichotomous variable that indicates whether the person in the national executive position (President) left office early either because he/she went to another position, resigned, died or was impeached.

1= early departure from office

0= opposite case

Source: Own elaboration.

head_party_national

Political party of the head of the national government (president)

Fuente: worldstatesmen.org y V-Dem.

ideo_party_national

Ideology reported by the political parties of the head of the national government divided into 4 categories (if blank, it is because the person was independent or did not have a political affiliation):

1= left

2= center left

3= center right

4= right

Source: as reported on the website of each of the political parties and considering what is reported and coded according to the party label in the studies of Coppedge (1997), Szajkowski (2005), Murillo et al.

(2010). Note: It should be considered that it is coded according to what is reported by the ideology of the Party which does not necessarily coincide with the type of policies that are developed in the government developed by the leader of the national executive.

Coppedge, Michael. 1997. A classification of Latin American political parties. *Working Paper* #224. Kellogg Institute.

Szajkowski, Bogdan. 2005. *Political Parties of the World*. London: John Harper Publishing Inc.

Murillo, María Victoria, Virginia Oliveros, and Milan Vaishnav. 2010. *"Dataset on Political Ideology of Presidents and Parties in Latin America."* Columbia University Press.

electoral_national_year

Dichotomous variable that identifies whether national elections were held during the year:

1 = presidential election year

0 = otherwise

Source: electoral registries of each country: <https://www.argentina.gob.ar/dine>; <https://ine.mx/>; <https://www.tse.jus.br/#/>

Sub-national Executive

head_name_sub

Name of Head of Subnational State (Governor)

Source: In Argentina it is obtained from Andy Tow's data with what was reported by Tulia Falleti in mail dated 04/21/2023 to Ernesto Calvo and Agustina Giraudy. The rest of the data is coded according to the subnational electoral information of the countries and state web portals in each country.

sex_head_sub

Sex of the head of the subnational State (Governor)

0 = Male

1 = Female

Source: Own elaboration.

term_head_sub

Period of subnational government in start and end date in (day/month/year) format.

Source: electoral registers of each country: <https://www.argentina.gob.ar/dine>; <https://ine.mx/>; <https://www.tse.jus.br/#/> Note: In addition, in the case of Argentina the information is verified as reported on the website <https://www.andytow.com/> and in Brazil it is corroborated with the information contained and processed by Meireles et al. (2016).

Meireles, Fernando; Silva, Denisson; Costa, Beatriz. (2016). electionsBR: R functions to download and clean Brazilian electoral data. URL: <http://electionsbr.com/novo/>

change_head_sub

Dichotomous variable indicating the change of the head of the subnational government (Governor). This variable identifies any change, including when a person assumes in case of early departure.

1 = year in which the change of the head of the subnational government (Governor) started or occurred.

0 = opposite case

Source: Own elaboration.

cumulative_changes_head_sub

Continuous variable that tracks from the beginning of coding the number of changes of the head of the subnational government (Governor), in the State. This variable identifies in an additive manner any change, including when a person assumes in case of early departure.

Source: Own elaboration.

years_sub_gov

Years in office of the head of the subnational government (Governor). The variable is coded according to the total time per election period that the incumbent has been in office. However, in cases of early exits, it is coded with the total time the person was in executive office until the next election.

Source: Own coding based on information from the Electoral Bodies of each country.

early_exit_sub

Dichotomous variable that indicates whether the person in the subnational executive office left office early either by leaving for another office, resignation, death or impeachment.

1= early departure from office

0= otherwise

Source: Own elaboration.

reelec_sub_gov

Dichotomous variable indicating the reelection of the head of the subnational government (Governor).

1= head of government has been reelected

0= not reelected

empty = missing in the case of Mexico due to non-reelection

Source: Own elaboration.

years_sub_gov_contin

Continuous years in which the head of the subnational government (Governor) has governed. This variable captures even when there is turnover, how many years in total the person has held the office of head of subnational government

Source: Own codification based on information from the Electoral Bodies of each country.

head_party_sub

Political party of the head of the national government (Governor). If the box is empty, it implies that the governor was independent or did not have a political affiliation.

Source: Own codification based on information from the Electoral Bodies of each country. Note: In addition to what was reported in Argentina by Tulia Falletti in a mail dated 04/21/2023 to Ernesto Calvo and Agustina Giraudy.

change_sub_gov_party

Dichotomous variable indicating the change of the party of the head of the subnational government (Governor). This variable identifies any change, even when a person assumes in case of early exit

1 = change of party

0 = no change in the party of the executive in power.

Source: Own codification based on information from the Electoral Bodies of each country.

cumulative_changes_party_sub

Continuous variable that tracks from the beginning of coding the number of changes in the party of the head of the subnational government (Governor), in the State. This variable identifies in an additive way any change, including when a person assumes in case of early departure.

Source: Own codification based on information from the Electoral Bodies of each country.

years_sub_gov_party_contin

Continuous years in which the party of the head of the subnational government (Governor) has governed. This variable captures even when there is turnover, how many years in total the party headed by an individual has held the office of head of subnational government

Source: Own codification based on information from the Electoral Bodies of each country.

ideo_party_sub

Ideology reported by the political parties of the subnational head of government divided into 4 categories (if blank, it is because the person was independent or did not have a political affiliation):

1= left

2= center left

3= center right

4= right

Source: as reported on the website of each of the political parties and considering what is reported and coded according to the party label in the studies of Coppedge (1997), Szajkowski (2005), Murillo et al. (2010). Note: It should be considered that it is coded according to what is reported by the ideology of the Party which does not necessarily coincide with the type of policies that are developed in the government developed by the leader of the national executive.

Coppedge, Michael. 1997. A classification of Latin American political parties. *Working Paper #224*. Kellogg Institute.

Szajkowski, Bogdan. 2005. *Political Parties of the World*. London: John Harper Publishing Inc.

electoral_sub_year

Dichotomous variable that identifies whether subnational elections were held during the year:

1 = year of regional elections for change of governor.

0 = otherwise

Source: Own codification based on information from the Electoral Bodies of each country.

cumulative_electoral_sub_year

Cumulative subnational elections in the state.

Source: Own codification

concurrent_sub_nat_election

Dichotomous variable that identifies whether elections were held during the year for subnational and national executive changes:

1 = if it is a year of regional elections for change of governor and national elections for presidency.

0 = otherwise

Source: Own codification based on information from the Electoral Bodies of each country.

alignment

Dichotomous variable that identifies whether there is alignment between the head of the national government and the head of the subnational government.

1 = if there is alignment between the head of the national and subnational government

0 = opposite case

Source: Own identification following the methodology of Giraudy (2015) and Niedzwiecki (2018). Note: This variable is founded upon the methodological framework established by Giraudy (2015) and Niedzwiecki (2018). It is imperative to acknowledge that this process entails a three-step analysis to code 1: i) The head of the national government belongs to the same political party as the head of the subnational government. ii) The political party of the head of the subnational government is part of the legislative coalition of the head of the national government. iii) Despite not meeting the criteria in (i) or (ii), which include independents or regional parties, it was observed that there is a political affinity and cooperation between the head of the national government and the head of the subnational government.

Giraudy, Agustina. 2015. *Democrats and autocrats: Pathways of subnational undemocratic regime continuity within democratic countries*. Oxford University Press.

Niedzwiecki, Sara. 2018. *Uneven social policies: The politics of subnational variation in Latin America*. Cambridge University Press.

Electoral Variables

Explanatory notes for this section

This section of the electoral variable codebook is divided into two subsections. The first pertains to data from subnational executive elections, while the second focuses on subnational legislative elections.

It is important to note that not all subnational units within each country begin their data series at the same year, even if a general starting point was previously established. For example, in Argentina, although electoral data for most provinces begin in 1983, data for the CAPITAL FEDERAL (now Ciudad Autónoma de Buenos Aires) start in 1996. This discrepancy is due to the enactment of the Buenos Aires City Constitution in that year, which created the office of Jefe de Gobierno (Head of Government), elected by popular vote from 1996 onwards. Data for Argentina are coded using official information from the Dirección Nacional Electoral and cross-verified with data from Andy Tow's electoral repository.

In the case of Brazil, data for all 27 federal units begin in 1998, which marks the earliest year for which systematically verified electoral data are available. These data are compiled based on records from the Tribunal Superior Eleitoral and corroborated using the information provided by Meireles et al. (2016) at ElectionsBR.

For Mexico, while the general starting point for electoral data is 1985, several federal entities begin their data series in later years. Specifically, electoral data are available from 1986 for the states of Durango, Sinaloa, Tlaxcala, and Tamaulipas; from 1988 for Morelos and Jalisco; from 1991 for San Luis Potosí; from 1992 for Zacatecas and Oaxaca; from 1993 for Nayarit and Hidalgo; from 1995 for Yucatán; and from 1997 for Mexico City (CDMX). The Mexican data are compiled using records from each state's Instituto Electoral Estatal and supplemented with information from the Instituto Nacional Electoral (INE).

Electoral Variables Subnational Executive

extraordinary_election

Dichotomous variable that identifies whether there was an extraordinary subnational executive election.

1 = If there is an (extra)ordinary election

0 = Otherwise

Source: information from the Electoral Bodies of each country.

date_electoral_sub

Day on which the electoral process takes place in day/month/year format.

Source: information from the Electoral Bodies of each country.

voters_registered_sub

The total number of registered voters for the electoral process of the chief executive in the subnational state.

Source: information from the Electoral Bodies of each country.

total_voters_sub

The total number of people who voted during the process of electing the chief executive in the subnational state (includes votes for parties, blank and invalid votes).

Source: information from the Electoral Bodies of each country.

voter_ratio_sub

The proportion of people who voted during the electoral process (includes votes for parties, blank and null votes). It is obtained by dividing the total number of eligible voters by the total number of voters in the State for the election process of the Subnational Chief Executive.

Source: information from the Electoral Bodies of each country.

valid_votes_sub

The total number of votes that are valid for the subnational head of government vote according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

valid_votes_ratio_sub

The percentage of votes that are valid for the subnational head of government vote according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

invalid_votes_sub

The total number of votes that are invalid or void for the subnational head of government vote according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

invalid_votes_ratio_sub

The percentage of votes that are invalid or void for the subnational head of government vote according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

votes_candidate_winner

The total number of votes going to the winning candidate in the subnational head of government vote according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

winner_candidate_ratio

The percentage of votes going to the winning candidate in the subnational head of government vote according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

second_place_votes

The total number of votes going to the second-place candidate during the subnational head of government vote according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

second_place_ratio

The percentage of votes going to the second-place candidate during the subnational head of government vote according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

last_place_votes

The total number of votes going to the last-place candidate during the subnational head of government vote according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

last_place_ratio

The percentage of votes going to the last-place candidate during the subnational head of government vote according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

margin_victory_exe

Measured as $v1 - v2$, where $v1$ is the percentage of votes for the winning gubernatorial candidate, and $v2$ is the percentage of votes for the second-place candidate.

Source: information from the Electoral Bodies of each country

num_parties_executive_election_contest

Number of parties participating in the vote for subnational head of government according to the State Election Management Body.

Source: information from the Electoral Bodies of each country.

ENP

The indicator measures the effective number of parties competing in gubernatorial elections based on the Laakso and Taagepera (1979) index.

Source: information from the Electoral Bodies of each country.

Electoral Variables Subnational Legislative**cameral_sub_leg**

Dichotomous variable indicating the number of chambers in the sub-national legislature *THIS VARIABLE IS OF INTEREST IN CONSIDERING THAT THE DATA CAPTURED WILL BE BASED ON THE LOWER OR SINGLE CHAMBER*.

1 = Unicameral

2 = Bicameral

Source: information from the Electoral Bodies of each country.

date_electoral_sub_leg

Day on which the subnational legislative electoral process takes place in day/month/year format.

Source: information from the Electoral Bodies of each country.

voters_registered_sub_leg

The total number of registered voters for the legislative electoral process in the subnational State.

Source: information from the Electoral Bodies of each country.

total_voters_sub_leg

The total number of people who actually voted during the legislative electoral process in the subnational state (includes votes for parties, blank and null votes).

Source: information from the Electoral Bodies of each country.

ratio_voters_sub_leg

The percentage of people who actually voted during the electoral process (includes votes for parties, blank and null votes). It is obtained by dividing the total number of eligible voters by the total number of voters in the State for the electoral process of the subnational legislature.

Source: information from the Electoral Bodies of each country.

valid_votes_sub_leg

The total number of votes that are valid for voting in the electoral process of the subnational legislature according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

valid_votes_ratio_sub_leg

The percentage of votes that are valid for voting in the electoral process of the subnational legislature according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

invalid_votes_sub_leg

The total number of votes that are invalid or void for voting in the subnational legislative electoral process according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

invalid_votes_ratio_sub_leg

The percentage of votes that are invalid or void for voting in the subnational legislative electoral process according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

votes_party_leg_winner

The total number of votes going to the political party with the highest number of seats in the subnational body according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

ratio_party_leg_winner

The percentage of votes going to the political party with the highest number of seats in the subnational body according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

votes_party_leg_second_place

The total number of votes going to the second-place political party during subnational legislative voting according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

ratio_party_leg_second_place

The percentage of votes going to the second-place political party during subnational legislative voting according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

votos_party_leg_last_place

The total number of votes going to the last-place political party during subnational legislative voting according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

ratio_party_leg_last_place

The percentage of votes that go to the last-place political party during subnational legislative voting according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

margin_victory_leg

Measured as $v1 - v2$, where $v1$ is the percentage of votes of the winning legislative party, and $v2$ is the percentage of votes of the second-place party.

Source: information from the Electoral Bodies of each country.

electoral_sub_year_leg

Dichotomous variable that identifies whether subnational legislative elections were held during the year:

1 = year of regional elections for the subnational legislature.

0 = otherwise

Source: Own codification based on information from the Electoral Bodies of each country.

cumulative_electoral_sub_year_leg

Cumulative subnational legislative elections in the state.

Source: Own codification.

concurrent_sub_nat_election_leg

Dichotomous variable that identifies whether elections for subnational executive and legislative change were held during the year, together with national elections:

1 = if it is a concurrent election year

0 = otherwise

Source: Own codification based on information from the Electoral Bodies of each country.

num_parties_legislative_election_contest

Number of parties participating in subnational legislative voting according to the State Electoral Management Body.

Source: information from the Electoral Bodies of each country.

num_legislative_seats

Total number of seats in the lower or single chamber of the subnational state that are contested during the codified electoral process.

Source: information from the Electoral Bodies of each country.

num_seats_legislative_government

Total number of seats in the lower or single chamber of the subnational legislature that were contested during the codified electoral process and were held by the party of the executive (excluding alliances; only the governor's own party is considered).

Source: information from the Electoral Bodies of each country.

ratio_seats_legislative_government

Total percentage of seats in the lower or single chamber of the subnational legislature that were contested during the codified electoral process and were held by the party of the executive (excluding alliances; only the governor's own party is considered).

Source: information from the Electoral Bodies of each country.

num_seats_legislative_opos

Total number of seats in the lower or single chamber of the subnational legislature that were contested during the codified electoral process and were held by the opposition (even if there are parties in alliance to oppose the subnational government).

Source: information from the Electoral Bodies of each country.

ratio_seats_legislative_opos

Total percentage of seats in the lower or single chamber of the subnational legislature that were contested during the codified electoral process and were held by the opposition (even if there are parties in alliance to oppose the subnational government).

Source: information from the Electoral Bodies of each country.

ENPL_ELEC

The indicator measures the effective number of subnational legislative parties that went to elections based on the Laakso and Taagepera (1979) index.

Source: information from the Electoral Bodies of each country.
