Introduction

The *Subnational Politics Project (SPP)* is part of a broader research project designed to compile, generate, and disseminate systematic, transparent, and publicly accessible data on subnational political institutions, subnational political processes, and subnational electoral outcomes in Latin America. The primary objective of the project is to create a centralized and standardized data infrastructure that facilitates both in-depth within-country analyses and cross-national comparative research on subnational political dynamics. By providing longitudinal and spatially disaggregated data, the SPP seeks to support empirical scholarship on a wide range of topics, including federalism, decentralization, party competition, electoral accountability, and territorial governance.

This codebook outlines the coding strategies, data sources, and variable construction protocols employed in the development of the SPP databases. As of July 2025, the project includes comprehensive databases for three federal countries in Latin America—Argentina, Brazil, and Mexico—covering the period from the 1980s through 2024 (see Table 1 for detailed country-specific information).

Project Overview

Objectives

- Document subnational political processes within Argentina, Brazil, and Mexico
- Enable comparative analysis of subnational governance patterns
- Provide users with standardized data on subnational elections and subnational political dynamics
- Support studies on subnational politics, federalism, political regimes, territorial politics, and political development

Databases' Structure

As Figure 1 shows, the *Subnational Politics Project* is made up of different databases.

Figure 1: Databases in SPP

Each database employs a country-state-year structure, with observations at the subnational unit level for each electoral year. Each observation represents a subnational unit (province/state) in a given year.

Intellectual Property

Variables taken directly from external sources, with no original coding beyond possible imputation of missing data, are not considered products of the *Subnational Politics Project*. In contrast, when data are drawn from multiple sources and combined in a way that involves analytical judgment, mathematical alteration, or aggregation, the resulting variable is classified as a *Subnational Politics Project* product.

Quality Assurance

All data have undergone rigorous verification processes:

1. **Primary Source Verification:** All data cross-checked with official electoral records
2. **Academic Validation:** Comparison with established academic datasets, where available
3. **Multiple Source Confirmation:** Key variables verified through multiple independent sources
4. **Temporal Consistency Checks:** Longitudinal data reviewed for consistency and logical progression

Country Coverage and Temporal Scope

Table 1: Coverage by Country

Country	Subnational Units	Executive Elections; data collection starts in:	Legislative Election; data collection starts in	Temporal Coverage
Argentina	24 provinces	1983	1983	1983-2024
Brazil	27 states	1998	1998	1998-2024
Mexico	32 states	1985	1985	1985-2024

Notes on Coverage

Argentina: Data for most provinces start in 1983, coinciding with the country’s return to democracy. Data for Tierra del Fuego and Ciudad Autónoma de Buenos Aires (formerly Capital Federal) began in 1991 and 1996, respectively, when these two subnational jurisdictions acquired the same legal status as all other provinces. In addition, information may be missing or incomplete for subnational legislative elections in Salta (1993), La Rioja (2015), and San Luis (2019).

Brazil: Electoral data for all 27 states begin in 1998, the earliest year for which systematically verified data are available. The database is compiled primarily from records of the *Tribunal Superior Eleitoral* and cross-validated using the ElectionsBR database (Meireles et al., 2016).

Mexico: The general starting point for data collection in v. 1 is 1985, though coverage varies across states. The following states are included beginning in:

- 1985: Campeche, Colima, Guanajuato, Nuevo León, Querétaro, Sonora
- 1986: Aguascalientes, Chihuahua, Durango, Guerrero, Michoacan, Puebla, Sinaloa, Tamaulipas, Tlaxcala, Veracruz
- 1987: Baja California Sur, Coahuila, Quintana Roo
- 1988: Chiapas, Jalisco, Morelos, Tabasco
- 1989: Baja California
- 1991: San Luis Potosí
- 1992: Oaxaca, Zacatecas
- 1993: Hidalgo, Nayarit
- 1995: Yucatán
- 1997: CDMX
- 1999: Estado de México

Variable Information

As Figure 2 shows, the databases in the *Subnational Politics Project* divide variables into the following variable types:

Variables Type	Sub-variable Type	Description	Dataset
Identifiers Variables	Cross-National Variables	Data on country names, years, and states	
Executive Branch Variables	National Executive Variables	Data on national executive branches per country	NED
	Sub-national Executive Variables	Data on subnational executive branches per state/province, per country	SED
Electoral Variables	Subnational Executive Elections Variables	Data on electoral results for executive branch	SEED
	Subnational Legislative Elections Variables	Data on subnational executive elections per state/province, per country	SLED
	Subnational Legislatures Variables	Data on institutional and electoral information about state-level/provincial legislatures	SLED
Index Variables	Subnational Democracy Index Variables	Data on levels of subnational democracy per state/province, per country	SDID

Figure 2: Variables and Corresponding Database

Variables include the following information:

- Identifier Variables:** Data identifying country names and codes, state names and codes, region names, and time periods
- Executive Branch Variables:** Data on national and subnational executive branches, such as length of term, incumbent party, cumulative years of president/governor in office, etc.
- Electoral Variables:** Data on subnational executive, and subnational legislative elections, including legislatures' composition
- Indices:** Data generated by adding and combining variables, or creating cumulative scales

Description of Individual Variables

Identifier Variables

country_name

- **Description:** Indicates the name of coded country
- **Type:** Categorical
- **Values:** ARGENTINA, BRAZIL, MEXICO
- **Source:** *Subnational Politics Project*, own coding based on ISO 3166 country names

country_code

- **Description:** Indicates the numeric country code according to the ISO 3166-1 standard
- **Type:** Categorical
- **Values:** 032 (Argentina), 076 (Brazil), 484 (Mexico)
- **Source:** *Subnational Politics Project*, own coding based on ISO 3166-1 numeric country codes

state_name

- **Description:** Indicates the name of the subnational unit (province/state)
- **Type:** Categorical
- **Note:** See Appendix A for a complete list of subnational units by country
- **Source:** *Subnational Politics Project*, own coding based on official administrative records

state_code

- **Description:** Indicates the numeric code for subnational unit within country
- **Type:** Categorical
- **Note:** Follows official coding systems used by each country's electoral authorities. See Appendix B for a complete list of subnational codes
- **Source:** *Subnational Politics Project*, own coding based on official coding systems from national electoral authorities

country_state_code

- **Description:** Indicates the combined country and state code (*country_code* + *state_code*)
- **Type:** Categorical
- **Format:** 5-digit numeric code
- **Note:** List of codes available in Appendix B

- **Source:** *Subnational Politics Project*, own coding based on official country and state codes

region_name

- **Description:** Indicates the geographic region within country
- **Type:** Categorical
- **Note:** Regional classifications follow established geographic divisions for each country. See Appendix B for a complete list of regions
- **Source:** *Subnational Politics Project*, own coding based on official geographic classifications for each country

year

- **Description:** Indicates the calendar year of observation
- **Type:** Numeric
- **Range:** 1983-2024 (varies by country)
- **Source:** *Subnational Politics Project*, own coding

Executive Branch Variables

National Executive

name_head_nat_exe

- **Description:** Indicates the name of the head of state (President)
- **Type:** Text
- **Notes:** If the president governed during a given year, their name is recorded for that year. For example, in 2024 the president of Argentina was Javier Milei; therefore, the variable *name_head_nat_exe* for 2024 contains “Javier Milei”. If multiple Presidents were appointed in a given year, for example, in an electoral year, the winning candidate is already recorded as president for that year. For instance, since the President assumes office on December 10, 2023, the variable *name_head_nat_exe* for 2023 records “Javier Milei”.
- **Source:** *Subnational Politics Project*, own coding based on World Statesmen (worldstatesmen.org) and V-Dem

sex_head_nat_exe

- **Description:** Indicates the gender of the head of state
- **Type:** Binary
- **Values:**
 - 0 = Male

- 1 = Female
- **Source:** *Subnational Politics Project*, extracted from V-Dem

start_date_head_nat_exe

- **Description:** Indicates the start date of the presidential term, in year-month-day format
- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** *Subnational Politics Project*, extracted from V-Dem

end_date_head_nat_exe

- **Description:** Indicates the end date of the presidential term, in year-month-day format
- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** *Subnational Politics Project*, extracted from V-Dem

term_length_in_years_nat_exe

- **Description:** Indicates the total duration of the president's current term in office
- **Type:** Numeric
- **Unit:** Years (decimal values allowed)
- **Formula:** Length of presidential term in years, calculated as the difference between *start_date_head_nat_exe* and *end_date_head_nat_exe*.
- **Example:**
 - Brazil, Lula's first term (2003-2006): years_nat_gov = 4.0 for all years 2003, 2004, 2005, 2006
 - Mexico, AMLO's term (2018-2024): years_nat_gov = 6.0 for all years 2018, 2019, 2020, 2021, 2022, 2023, 2024
- **Source:** *Subnational Politics Project*, own calculation based on *start_date_head_nat_exe* and *end_date_head_nat_exe* (V-Dem)

consecutive_reelection_nat_exe

- **Description:** Indicates whether a president was re-elected to a consecutive term
- **Type:** Binary
- **Values:**
 - 1 = Head of government has been reelected
 - 0 = Otherwise
- **Note:** Only immediate consecutive re-elections are coded. Non-consecutive terms are **not** considered re-elections
- **Example:** Lula da Silva's third term(2023–) is **not** coded as a re-election, since it followed a gap after his second term.
- **Source:** *Subnational Politics Project*, own coding based on V-Dem

early_exit_nat_exe

- **Description:** Indicates whether the president left office before completing their constitutional term
- **Type:** Binary
- **Values:**
 - 1 = Early departure from office (due to resignation, death, impeachment, removal, or other causes)
 - 0 = Completed full constitutional term or still in office
- **Note:** Includes all forms of premature departure regardless of cause.
 - Raúl Ricardo Alfonsín (Argentina) had an early exit on 1989, this was not added to the database
- **Source:** *Subnational Politics Project*, own coding based on official records

head_party_nat_exe

- **Description:** Indicates the political party of the president
- **Type:** Categorical
- **Source:** *Subnational Politics Project*, own coding based on World Statesmen (worldstatesmen.org) and V-Dem

ideo_party_nat_exe

- **Description:** Indicates the ideological classification of the president's political party
- **Type:** Ordinal
- **Values:**
 - 1 = Left
 - 2 = Center-left
 - 3 = Center-right
 - 4 = Right
 - [blank] = Independent or no political affiliation
- **Note:** Classification based on party platforms and programs, not implemented policies
- **Examples:**
 - **Left (1):** Brazil's PT (Partido dos Trabalhadores) under Lula/Dilma 2003-2016
 - **Center-left (2):** Argentina's FREPASO (Frente País Solidario) or Brazil's PSB (Partido Socialista Brasileiro) in coalition governments
 - **Center-right (3):** Argentina's UCR (Unión Cívica Radical) or Brazil's PSDB (Partido da Social Democracia Brasileira)
 - **Right (4):** Mexico's PAN (Partido Acción Nacional) 2000-2012, Argentina's PRO (Propuesta Republicana) under Macri
 - **Independent [blank]:** Rare at presidential level in these countries
- **Source:** *Subnational Politics Project*, own coding based on Coppedge (1997), Szajkowski (2005), Murillo et al. (2010), and official party platforms/websites

year_election_nat_exe

- **Description:** Indicates whether national presidential elections were held during the observed calendar year

- **Type:** Binary
- **Values:**
 - 1 = Presidential election year
 - 0 = Otherwise
- **Source:** *Subnational Politics Project*, own coding based on national electoral agencies: argentina.gob.ar/dine, ine.mx, tse.jus.br

cumulative_years_in_power_nat_exe

- **Description:** Indicates the total number of years the president has held executive office
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, own calculation based on official records of executive office tenure

Subnational Executive

name_head_sub_exe

- **Description:** Indicates the name of the head of the subnational state (Governor)
- **Type:** Text
- **Notes:** If the governor ruled during a given year, their name is recorded for that year. For example, in 2019 the governor of CDMX was Claudia Sheinbaum; therefore, the variable *name_head_sub_exe* for 2019 contains “Claudia Sheinbaum”. If multiple Governors were appointed in a given year, for example, in an electoral year, the winning candidate is already recorded as governor for that year. For instance, since the governor assumed office on December 5, the variable *name_head_sub_exe* for 2018 records “Claudia Sheinbaum”.
- **Source:** *Subnational Politics Project*, own coding based on Andy Tow’s data (Argentina, verified by Tulia Falletti, email correspondence on 04/21/2023) and, for other countries, official subnational electoral information and state web portals

sex_head_sub_exe

- **Description:** Indicates the gender of the governor
- **Type:** Binary
- **Values:**
 - 0 = Male
 - 1 = Female
- **Source:** *Subnational Politics Project*, own coding based on official records

start_date_head_sub_exe

- **Description:** Indicates the start date of the subnational government, in year-month-day format

- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** *Subnational Politics Project*, own coding based on V-Dem

end_date_head_sub_exe

- **Description:** Indicates the end date of the subnational government, in year-month-day format
- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** *Subnational Politics Project*, own coding based on V-Dem

term_length_in_years_sub_exe

- **Description:** Indicates the total duration of the governor's term in office
- **Type:** Numeric
- **Unit:** Years (decimal values allowed)
- **Formula:** Length of governor's term in years, calculated as the difference between *start_date_head_sub_exe* and *end_date_head_sub_exe*. Example:
 - María Eugenia Vidal served as Governor of Buenos Aires (Argentina) from December 11, 2015, to December 11, 2019, which amounts to approximately 4.00 years, using December 10, 2023, as the reference date
- **Source:** *Subnational Politics Project*, own calculation based on *start_date_head_sub_exe* and *end_date_head_sub_exe* (V-Dem)

change_head_sub_exe

- **Description:** Indicates the change of governor
- **Type:** Binary
- **Values:**
 - 1 = Year when change occurred
 - 0 = Otherwise
- **Note:** Refers to any type of change, including succession due to early exit/federal intervention/death/etc.
- **Source:** *Subnational Politics Project*, own coding based on official records

cumulative_changes_head_sub_exe

- **Description:** Indicates the cumulative count of gubernatorial changes since start of data series
- **Type:** Numeric (count)
- **Range:** 0 to n (where n = total changes observed)
- **Note:** Increments of 1, each time a new governor comes to power, including interim or new appointment (due to early exit)
- **Measurement:** Cumulative count from first year of data coverage for each state
- **Example:**

- **Buenos Aires Province, 1983-2023:**
 - 1983: Felipe Solá becomes governor (cumulative_changes_head_sub = 1)
 - 1987: Antonio Cafiero takes office (cumulative_changes_head_sub = 2)
 - 1991: Eduardo Duhalde elected (cumulative_changes_head_sub = 3)
 - 1999: Carlos Ruckauf takes office (cumulative_changes_head_sub = 4)
 - 2002: Felipe Solá returns to office (cumulative_changes_head_sub = 5)
 - 2007: Daniel Scioli elected (cumulative_changes_head_sub = 6)
 - 2015: María Eugenia Vidal takes office (cumulative_changes_head_sub = 7)
 - 2019: Axel Kicillof elected (cumulative_changes_head_sub = 8)
- **Source:** *Subnational Politics Project*, own calculation based on official records

early_exit_sub_exe

- **Description:** Indicates early exit from gubernatorial office for a given year (as a result of for example, resignation, death, impeachment, federal intervention, among others)
- **Type:** Binary
- **Values:**
 - 1 = Early exit
 - 0 = Otherwise
- **Source:** *Subnational Politics Project*, own coding based on official records

consecutive_reelection_sub_exe

- **Description:** Indicates whether a governor was re-elected to a consecutive term
- **Type:** Binary
- **Values:**
 - 1 = Governor was reelected (won election for consecutive term)
 - 0 = Governor was not reelected (first term, term-limited, or defeated)
 - [blank] = Not applicable (e.g., Mexico where gubernatorial reelection is prohibited)
- **Note:** Only codes direct reelection to consecutive terms, not returns to office after intervals
- **Source:** *Subnational Politics Project*, own coding based on official records

cumulative_years_in_power_sub_exe

- **Description:** Indicates the total number of years the governor has held subnational executive office
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, own calculation based on official records of executive office tenure

head_party_sub_exe

- **Description:** Indicates the political party of the governor

- **Type:** Categorical
- **Source:** *Subnational Politics Project*, own coding based on national and subnational electoral agencies

years_party_contin_sub_exe

- **Description:** Indicates the total number of years that governor has served across all terms in office as part of the party
- **Type:** Numeric
- **Unit:** Years (decimal values allowed)
- **Measurement Logic:**
 - **Single term governors:** Same value as *years_sub_gov*
 - **Multi-term governors:** Cumulative years across all terms served by the same individual
 - **Interrupted tenure:** Includes breaks across terms if the same person returns to office
- **Note:** Tracks individual tenure regardless of party changes or electoral defeats followed by comebacks
- **Source:** *Subnational Politics Project*, own calculation based on national and subnational electoral agencies

ideo_party_sub_exe

- **Description:** Indicates the ideological classification of governor's political party
- **Type:** Ordinal
- **Values:**
 - 1 = Left
 - 2 = Center-left
 - 3 = Center-right
 - 4 = Right
 - [blank] = Independent or no political affiliation
- **Note:** Classification based on party platforms and programs
- **Source:** *Subnational Politics Project*, own coding based on Coppedge (1997), Szajkowski (2005), Murillo et al. (2010), and official party platforms/websites

concurrent_with_nat_election_sub_exe

- **Description:** Indicates whether gubernatorial and presidential elections were held in the same calendar year
- **Type:** Binary
- **Values:**
 - 1 = Concurrent election year (both gubernatorial and presidential elections held)
 - 0 = Non-concurrent year (only one type of election or neither)
- **Measurement:** Based on calendar year, not exact election dates
- **Note:** Important for analyzing electoral coattail effects and vertical electoral coordination
- **Examples:**

- **Concurrent (1):** Brazil, 2018 - All states elect governors in October alongside presidential election
- **Concurrent (1):** Mexico, 2018 - 9 states (including CDMX, Jalisco, and Morelos) hold gubernatorial elections the same year as the presidential election
- **Non-concurrent (0):** Argentina, 2017 - No presidential election, but several provinces (Buenos Aires, Córdoba, etc.) elect governors
- **Non-concurrent (0):** Mexico, 2019 - No presidential election, but Baja California holds gubernatorial election
- **Country patterns:** Brazil always concurrent (every 4 years), Argentina/Mexico mixed timing
- **Source:** *Subnational Politics Project*, own coding based on national and subnational electoral agencies

change_party_sub_exe

- **Description:** Indicates the change of party in gubernatorial office
- **Type:** Binary
- **Values:**
 - 1 = Year when change occurred
 - 0 = Otherwise
- **Source:** *Subnational Politics Project*, own coding based on official records

cumulative_changes_party_sub_exe

- **Description:** Indicates the cumulative count of changes of party in the state
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, own coding based on official records

alignment_with_nat_sub_exe

- **Description:** Indicates political alignment between national president and subnational governor
- **Type:** Binary
- **Values:**
 - 1 = Political alignment exists
 - 0 = No political alignment
- **Coding Criteria:** Following Giraudy (2015) and Niedzwiecki (2018), coded as 1 if any of the following conditions are met:
 - **Same party membership:** President and governor belong to the same political party
 - **Coalition partnership:** Governor's party is part of the president's legislative coalition at national level
 - **Political cooperation:** Despite different party affiliations, observable political affinity and cooperative behavior exists between president and governor
- **Examples:**

- **Criterion 1 - São Paulo, 2003:** PT President Lula + PT Governor José Genoïno = 1 (same party)
 - **Criterion 2 - Santa Fe, Argentina, 2008:** PJ President Cristina Kirchner + PS Governor Hermes Binner = 1 (PS supports national government coalition)
 - **Criterion 3 - Nuevo León, Mexico, 2001:** PAN President Fox + Independent Governor Natividad González = 1 (cooperation despite different affiliations)
 - **No alignment - Córdoba, Argentina, 2017:** Cambiemos President Macri + PJ Governor Schiaretti = 0 (opposition parties, no cooperation)
 - **Note:** Focuses on political cooperation rather than strict party membership
 - **Source:** *Subnational Politics Project*, own coding based on Giraudy (2015) and Niedzwiecki (2018)
-

Electoral Variables

Subnational Executive

election_sub_exe

- **Description:** Indicates whether a legislative election took place in a given year
- **Type:** Binary
- **Values:**
 - 1 = Election held
 - 0 = Otherwise
- **Source:** *Subnational Politics Project*, own coding based on official records of subnational executive elections

winner_candidate_sub_exe

- **Description:** Indicates the name of the candidate who won and assumed office as governor
- **Type:** Text
- **Source:** *Subnational Politics Project*, own coding based on Andy Tow's data (Argentina, verified by Tulia Falletti, email correspondence on 04/21/2023) and, for other countries, official subnational electoral information and state web portals

date_election_sub_exe

- **Description:** Indicates the date of subnational executive electoral process
- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

ideo_party_sub_exe

- **Description:** Indicates the ideological classification of governor's political party
- **Type:** Ordinal
- **Values:**
 - 1 = Left
 - 2 = Center-left
 - 3 = Center-right
 - 4 = Right
 - [blank] = Independent or no political affiliation
- **Note:** Classification based on party platforms and programs
- **Source:** *Subnational Politics Project*, own coding based on Coppedge (1997), Szajkowski (2005), Murillo et al. (2010), and official party platforms/websites

voters_registered_sub_exe

- **Description:** Indicates the total registered voters for subnational executive election
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

total_voters_sub_exe

- **Description:** Indicates the total people who voted in subnational executive election
- **Type:** Numeric (count)
- **Note:** Includes votes for parties, blank votes, and null votes
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

perc_voter_sub_exe

- **Description:** Indicates the voter turnout rate for subnational executive election
- **Type:** Numeric (percentage)
- **Formula:** $(total_voters_sub / voters_registered_sub) \times 100$
- **Source:** *Subnational Politics Project*, own calculation based on data from subnational electoral agencies

valid_votes_sub_exe

- **Description:** Indicates the total valid votes for subnational executive election
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

perc_valid_votes_sub_exe

- **Description:** Indicates the valid votes as percentage of total votes
- **Type:** Numeric (percentage)
- **Formula:** $(valid_votes_sub / total_voters_sub) \times 100$
- **Source:** *Subnational Politics Project*, own calculation based on data from subnational electoral agencies

invalid_votes_sub_exe

- **Description:** Indicates the total invalid/void votes for subnational executive election
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, own calculation based on data from subnational electoral agencies

perc_invalid_votes_sub_exe

- **Description:** Indicates the invalid votes as percentage of total votes
- **Type:** Numeric (percentage)
- **Formula:** $(invalid_votes_sub / total_voters_sub) \times 100$
- **Source:** *Subnational Politics Project*, own calculation based on data from subnational electoral agencies

votes_candidate_winner_sub_exe

- **Description:** Indicates the total votes for winning gubernatorial candidate
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

perc_votes_winner_candidate_sub_exe

- **Description:** Indicates the vote share of winning gubernatorial candidate
- **Type:** Numeric (percentage)
- **Formula:** $(votes_candidate_winner / valid_votes_sub) \times 100$
- **Source:** *Subnational Politics Project*, own calculation based on data from subnational electoral agencies

second_place_votes_sub_exe

- **Description:** Indicates the total votes for second-place gubernatorial candidate
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

perc_second_place_sub_exe

- **Description:** Indicates the vote share of second-place gubernatorial candidate
- **Type:** Numeric (percentage)
- **Formula:** $(second_place_votes / valid_votes_sub) \times 100$
- **Source:** *Subnational Politics Project*, own coding based on subnational electoral agencies

last_place_votes_sub_exe

- **Description:** Indicates the total votes for last-place gubernatorial candidate
- **Type:** Numeric (count)

- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

perc_last_place_sub_exe

- **Description:** Indicates the vote share of last-place gubernatorial candidate
- **Type:** Numeric (percentage)
- **Formula:** $(last_place_votes / valid_votes_sub) \times 100$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

margin_victory_sub_exe

- **Description:** Indicates the victory margin in gubernatorial election
- **Type:** Numeric (percentage)
- **Formula:** $winner_candidate_ratio - second_place_ratio$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

num_parties_election_contest_sub_exe

- **Description:** Indicates the number of parties competing in gubernatorial election
- **Type:** Numeric (count)
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

cumulative_electoral_year_sub_exe

- **Description:** Indicates the cumulative count of subnational executive elections in the state
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, own calculation based on official subnational electoral calendars

snap_election_sub_exe

- **Description:** Indicates the early subnational executive election
- **Type:** Binary
- **Values:**
 - 1 = Snap election occurred
 - 0 = Otherwise
- **Source:** *Subnational Politics Project*, own coding based on national and subnational electoral agencies

enp_sub_exe

- **Description:** Indicates the Effective Number of Parties competing in gubernatorial elections
 - **Type:** Numeric (continuous)
 - **Range:** 1.0 to n (where n = theoretical maximum based on number of candidates)
 - **Formula:** $ENP = 1/\sum(p_i^2)$, where p_i is the vote share of party i
 - **Calculation:** Based on Laakso and Taagepera (1979) index using vote shares of all competing parties
 - **Interpretation:**
 - Values near 1.0 = dominant party system
 - Values near 2.0 = two-party competition
 - Higher values = more fragmented party system
 - **Examples:**
 - **Dominant system (ENP ≈ 1.2):** Coahuila, Mexico, 2005 - PRI candidate wins with 89% vs. 8% PAN, 3% others
 - **Two-party competition (ENP ≈ 2.1):** São Paulo, Brazil, 2018 - PSDB 51.7% vs. PT 48.3% in runoff
 - **Fragmented system (ENP ≈ 3.8):** Buenos Aires, Argentina, 2015 - Cambiemos 35.4%, FPV 30.1%, Massa 20.8%, others 13.7%
 - **Highly fragmented (ENP ≈ 5.2):** CDMX, Mexico, 2018 - MORENA 32.1%, PAN 21.8%, PRD 15.4%, PRI 12.3%, others 18.4%
 - **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies
-

Subnational Legislative

chamber_election_sub_leg

- **Description:** Indicates the chamber in which elections are held that year in the state
- **Type:** Categorical
- **Values:**
 - 1 = Lower Chamber
 - 2 = Upper Chamber
- **Source:** Subnational Politics Project, own coding based on official records

date_election_sub_leg

- **Description:** Indicates the date of subnational legislative electoral process
- **Type:** Date
- **Format:** yyyy-mm-dd (ISO 8601 standard)
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

voters_registered_sub_leg

- **Description:** Indicates the total registered voters for subnational legislative election
- **Type:** Numeric (count)
- **Note:** In states with mixed electoral systems, the total number of registered voters corresponds to the sum of those all registered across all districts in a given province. For example, in the Río Negro (Argentina) elections, 24 legislators are elected for predefined electoral districts, while another 22 are elected based the province as a single district. In the 2023 election, there were 589,251 registered voters, each of whom cast two ballots due to the mixed system. Accordingly, the database records 1,178,502 ($589,251 \times 2$) as the total number of registered voters in that year for that state
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

total_voters_sub_leg

- **Description:** Indicates the total people who voted in subnational legislative election
- **Type:** Numeric (count)
- **Note:** Includes votes for parties, blank votes, and null votes. Additionally, in states with mixed electoral systems, the total number of voters corresponds to the sum of those counted across all districts. For example, in the Río Negro (Argentina) elections, 24 legislators are elected at a rate of three per electoral district, while another 22 are elected using the province as a single district. In the 2023 election, there were 400,227 voters in the former and 400,993 voters in the latter. Accordingly, the database records 801,220 ($400,227 + 400,993$) as the total number of voters for that state in that year
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

perc_voters_sub_leg

- **Description:** Indicates the voter turnout rate for subnational legislative election
- **Type:** Numeric (percentage)
- **Formula:** $(total_voters_sub_leg / voters_registered_sub_leg) \times 100$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

valid_votes_sub_leg

- **Description:** Indicates the total valid votes for subnational legislative election
- **Type:** Numeric (count)
- **Notes:** Official records sometimes report the same number of valid votes and positive votes in a given election. Additionally, the number of valid votes in states with mixed electoral systems, is the result of the sum of valid votes obtained by each party across all electoral districts
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

perc_valid_votes_sub_leg

- **Description:** Indicates the valid votes as percentage of total votes in legislative election
- **Type:** Numeric (percentage)
- **Formula:** $(valid_votes_sub_leg / total_voters_sub_leg) \times 100$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

party_name_sub_leg

- **Description:** Indicates the name of the party or the electoral coalition that competed in the subnational legislative election
- **Type:** Text
- **Source:** Subnational Politics Project, own coding based on subnational electoral agencies

total_votes_party_sub_leg

- **Description:** Indicates the total people who voted in the subnational legislative election for a party/electoral coalition
- **Type:** Numeric (count)
- **Note:** In states with mixed electoral systems, the total number of votes obtained by each party corresponds to the sum of votes cast across all districts. For example, in the Río Negro (Argentina) elections, 24 legislators are elected at a rate of three per electoral district, while another 22 are elected using the province as a single district. In the 2023 elections, Juntos Somos Río Negro obtained 101,159 votes across the electoral districts and 85,592 votes in the single provincial district, for a total of 186,751 votes. Accordingly, the database records 186,751 as the total votes obtained by that party in that year
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

perc_votes_party_sub_leg

- **Description:** Indicates the percentage of votes obtained in the subnational legislative election for the party/electoral coalition
- **Type:** Numeric (percentage)
- **Formula:** $(total_votes_party_sub_leg / valid_votes_sub_leg) \times 100$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

total_seats_party_sub_leg

- **Description:** Indicates the number of seats obtained by the party/electoral coalition in the subnational legislative election
- **Type:** Numeric (count)
- **Note:** In states with mixed electoral systems, the total number of seats obtained by each party corresponds to the sum of seats cast across all districts. For example, in the Río Negro (Argentina) elections, 24 legislators are elected per electoral district, while another 22 are elected using the province as a single district. In the 2023 elections, Juntos Somos

Río Negro obtained 13 seats across the electoral districts and 6 seats in the single provincial district, for a total of 19 seats. Accordingly, the database records 19 as the total seats obtained by that party in that year

- **Source:** *Subnational Politics Project*, extracted from subnational legislatures and subnational electoral agencies

perc_seats_party_sub_leg

- **Description:** Indicates the percentage of seats obtained by the party/alliance in the subnational legislative election
- **Type:** Numeric (percentage)
- **Formula:** $(total_seats_party_sub_leg / total_seats_in_contest_sub_leg) \times 100$
- **Source:** *Subnational Politics Project*, own calculations from *total_seats_party_sub_leg* variable

blank_votes_sub_leg

- **Description:** Indicates the number of blank votes in the subnational legislative election
- **Type:** Numeric (count)
- **Note:** The number of blank votes in states with mixed electoral systems, is the result of the sum of blank votes obtained by each party across all electoral districts
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

null_votes_sub_leg

- **Description:** Indicates the number of null votes in the subnational legislative election
- **Type:** Numeric (count)
- **Note:** The number of null votes in states with mixed electoral systems, is the result of the sum of null votes obtained by each party across all electoral districts
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

challenged_votes_sub_leg

- **Description:** Indicates the number of challenged votes in the subnational legislative election
- **Type:** Numeric (count)
- **Note:** The number of challenged votes in states with mixed electoral systems, is the result of the sum of challenged votes obtained by each party across all electoral districts
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

impounded_votes_sub_leg

- **Description:** Indicates the number of contested voting identities in the subnational legislative election
- **Type:** Numeric (count)

- **Note:** The number of impounded votes in states with mixed electoral systems, is the result of the sum of impounded votes obtained by each party across all electoral districts
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

compensation_for_record_discrepancy_votes_sub_leg

- **Description:** Indicates the number of votes offset by discrepancy in the tally sheets in the subnational legislative election
- **Type:** Numeric (count)
- **Source:** *Subnational Politics Project*, extracted from subnational electoral agencies

margin_victory_sub_leg

- **Description:** Indicates the victory margin in the subnational legislative election
- **Type:** Numeric (percentage)
- **Formula:** percentage of votes obtained by the winning party - percentage of votes obtained by the second-place party
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

cumulative_electoral_year_sub_leg

- **Description:** Indicates the cumulative count of subnational legislative elections
- **Type:** Numeric (count)
- **Note:** Running total from beginning of data series
- **Source:** Subnational Politics Project, own coding based on subnational electoral agencies

concurrent_election_with_nat_sub_leg

- **Description:** Indicates whether gubernatorial and presidential elections were held in the same calendar year
- **Type:** Binary
- **Values:**
 - 1 = Concurrent election year (both gubernatorial and presidential elections held)
 - 0 = Non-concurrent year (only one type of election or neither)
- **Measurement:** Based on calendar year, not exact election dates
- **Note:** Important for analyzing electoral coattail effects and vertical electoral coordination
- **Examples:**
 - **Concurrent (1):** Brazil, 2018 - All states elect governors in October alongside presidential election
 - **Concurrent (1):** Mexico, 2018 - 9 states (including CDMX, Jalisco, and Morelos) hold gubernatorial elections same year as presidential
 - **Non-concurrent (0):** Argentina, 2017 - No presidential election, but several provinces (Buenos Aires, Córdoba, etc.) elect governors
 - **Non-concurrent (0):** Mexico, 2019 - No presidential election, but Baja California holds gubernatorial election

- **Country patterns:** Brazil always concurrent (every 4 years), Argentina/Mexico mixed timing
- **Source:** Subnational Politics Project, own coding based on national and subnational electoral agencies

num_parties_election_contest_sub_leg

- **Description:** Indicates the number of parties that participated in the election to the subnational legislature
- **Type:** Numeric (count)
- **Note:** The number of parties elected to contest in states with mixed electoral systems, is the result of the sum of the number of unique parties across all electoral districts. For example in 2023 Rio Negro (Argentina) election, 11 parties competed using the province as a single district and 10 competed in electoral circuits. The number of parties that the dataset will say is '11'
- **Source:** Subnational Politics Project, own coding based on subnational electoral agencies

total_seats_in_contest_sub_leg

- **Description:** Indicates the number of parties competing in subnational legislative election
- **Type:** Numeric (count)
- **Note:** The number of total seats in contest in states with mixed electoral systems, is the result of the sum of seats in dispute across all electoral districts. For example, in 2023 Rio Negro (Argentina) election 46 seats were in contest, where 24 legislators are elected at a rate of three per electoral district, while another 22 are elected using the province as a single district. The final value in this case will be '46'
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

total_chamber_seats_sub_leg

- **Description:** Indicates the total seats in lower/single chamber of subnational legislature
- **Type:** Numeric (count)
- **Source:** Subnational Politics Project, extracted from subnational electoral agencies

num_seats_incumbent_sub_leg

- **Description:** Indicates the seats held by governor's party in subnational legislature
- **Type:** Numeric (count)
- **Note:** Excludes coalition partners; only the governor's own party. Additionally, the number of seats in states with mixed electoral systems, is the result of the sum of seats votes obtained by the governor's party across all electoral districts
- **Source:** Subnational Politics Project, own coding based on subnational electoral agencies

perc_seats_incumbent_sub_leg

- **Description:** Indicates the percentage of legislative seats held by the governor's political party
- **Type:** Numeric (percentage)
- **Range:** 0.0 to 100.0
- **Formula:** $(num_seats_legislative_government / num_legislative_seats) \times 100$
- **Measurement Rules:**
 - **Party identification:** Only counts seats won by the governor's exact party
 - **Coalition exclusion:** Does not include allied or coalition parties
 - **Independent governors:** Coded as 0 when governor has no party affiliation
- **Interpretation:**
 - Values > 50.0 = Governor's party has legislative majority
 - Values < 50.0 = Governor's party in legislative minority
- **Examples:**
 - **Strong majority:** Veracruz, Mexico, 2016 - PAN Governor + 30 of 50 seats (60.0%)
 - **Bare majority:** Minas Gerais, Brazil, 2018 - NOVO Governor + 38 of 77 seats (49.4%)
 - **Weak minority:** Buenos Aires, Argentina, 2015 - Cambiemos Governor + 15 of 92 seats (16.3%)
 - **Coalition scenario:** Santa Fe, Argentina, 2019 - PJ Governor wins but allied parties hold additional seats not counted in this variable
 - **Independent governor:** Nuevo León, Mexico, 2015 - Independent Governor = 0.0% (no party affiliation)
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

num_seats_opos_sub_leg

- **Description:** Indicates the seats held by opposition parties in subnational legislature
- **Type:** Numeric (count)
- **Note:** Includes all parties opposing subnational government. Additionally, the number of seats in states with mixed electoral systems, is the result of the sum of seats votes obtained by the opposition parties across all electoral districts
- **Source:** Subnational Politics Project, own coding based on subnational electoral agencies

perc_seats_opos_sub_leg

- **Description:** Indicates the percentage of legislative seats held by opposition
- **Type:** Numeric (percentage)
- **Formula:** $(num_seats_legislative_opos / num_legislative_seats) \times 100$
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

enp_sub_leg

- **Description:** Indicates the Effective Number of Legislative Parties based on electoral vote shares
- **Type:** Numeric (continuous)
- **Range:** 1.0 to n (where n = theoretical maximum based on number of parties)
- **Formula:** $ENPL = 1/\sum(v_i^2)$, where v_i is the vote share of party i in legislative elections
- **Calculation:** Based on Laakso and Taagepera (1979) index using vote shares of all competing parties in subnational legislative elections
- **Interpretation:**
 - Values near 1.0 = dominant party system in legislature
 - Values near 2.0 = two-party competition
 - Higher values = more fragmented party system
- **Examples:**
 - **Dominant system (ENP $\approx$ 1.1):** La Rioja, Argentina, 2023 - FRENTE DE TODOS 82.22% vs. JUNTOS POR EL CAMBIO 10.34%, LA LIBERTAD AVANZA 5.46%, others 1.89%
 - **Two-party competition (ENP $\approx$ 2.0):** Santa Cruz, Argentina, 1987 - FRENTE RENOVADOR JUSTICIALISTA 49.35% vs. UNION CIVICA RADICAL 47.34% in runoff
 - **Fragmented system (ENP $\approx$ 3.8):** La Pampa, Argentina, 1983 - JUSTICIALISTA 40.38%, UNION CIVICA RADICAL 32.07%, MOVIMIENTO FEDERALISTA PAMPEANO 19.62%, others 7.93%
 - **Highly fragmented (ENP $\approx$ 8.9):** Ciudad de Buenos Aires, Argentina, 2003 - ALIANZA FUERZA PORTEÑA 13.84%, AUTODETERMINACIÓN Y LIBERTAD 12.53%, ALIANZA FRENTE DE LA ESPERANZA PORTEÑA 12.20%, ALIANZA FRENTE COMPROMISO PARA EL CAMBIO 10.35%, others 51.13%
- **Note:** Measures party system fragmentation at the electoral level (votes) rather than seat allocation
- **Source:** Subnational Politics Project, own calculation based on subnational electoral agencies

chamber_sub_leg

- **Description:** Indicates the number of chambers in subnational legislature
- **Type:** Categorical
- **Values:**
 - 1 = Unicameral
 - 2 = Bicameral
- **Note:** Data captured for lower or single chamber only. The following Argentine provincial changes are reflected:
 - Córdoba was bicameral until the 2001 constitutional reform, when it became unicameral
 - San Luis has been bicameral since 1987
 - Tucumán has been unicameral since 1990
- **Source:** *Subnational Politics Project*, extracted from official records.

term_length_in_years_sub_leg

- **Description:** Indicates the term length in years of legislators as of July 2025
- **Type:** Numeric (count)
- **Source:** Subnational Politics Project, extracted from official records. Latest version of provincial constitutions through July 2025

renewal_type_sub_leg

- **Description:** Indicates the type of renewal per chamber as of July 2025
- **Type:** Categorical
- **Values:**
 - 1 = Staggered every 2 years
 - 2 = Full renewal
- **Source:** Subnational Politics Project, extracted from official records. Latest version of provincial constitutions through July 2025

electoral_system_sub_leg

- **Description:** Indicates the type of electoral system per chamber as of July 2025
- **Type:** Categorical
- **Values:**
 - 1 = Proportional Representation
 - 2 = Simple Majority
 - 3 = Mixed (Proportional Representation and Simple Majority)
 - 4 = Mixed (Proportional Representation with predefined electoral districts)
- **Source:** Subnational Politics Project, extracted from official records. Latest version of provincial constitutions through July 2025

Appendices

Appendix A: Subnational Units by Country

Argentina (24 units)

Buenos Aires, Ciudad Autónoma de Buenos Aires, Catamarca, Chaco, Chubut, Córdoba, Corrientes, Entre Ríos, Formosa, Jujuy, La Pampa, La Rioja, Mendoza, Misiones, Neuquén, Río Negro, Salta, San Juan, San Luis, Santa Cruz, Santa Fe, Santiago del Estero, Tierra del Fuego, Tucumán

Brazil (27 units)

Acre, Alagoas, Amapá, Amazonas, Bahia, Ceará, Distrito Federal, Espírito Santo, Goiás, Maranhão, Mato Grosso do Sul, Mato Grosso, Minas Gerais, Pará, Paraíba, Paraná, Pernambuco, Piauí, Rio de Janeiro, Rio Grande do Norte, Rio Grande do Sul, Rondônia, Roraima, Santa Catarina, São Paulo, Sergipe, Tocantins

Mexico (32 units)

Aguascalientes, Baja California, Baja California Sur, Campeche, Ciudad de México, Chiapas, Chihuahua, Coahuila, Colima, Durango, Guanajuato, Guerrero, Hidalgo, Jalisco, México, Michoacán, Morelos, Nayarit, Nuevo León, Oaxaca, Puebla, Querétaro, Quintana Roo, San Luis Potosí, Sinaloa, Sonora, Tabasco, Tamaulipas, Tlaxcala, Veracruz, Yucatán, Zacatecas

Appendix B: State Codes by Country

Table B.1: Complete List of Subnational Units with Codes

Country	Country Code	State Name	State Code	Combined Code	Region
ARGENTINA	032				
Argentina	032	BUENOS AIRES	06	03206	PAMPA
Argentina	032	CAPITAL FEDERAL	02	03202	PAMPA
Argentina	032	CATAMARCA	10	03210	NOROESTE
